DETAILED ACTION***Allowable Subject Matter***

All claims are allowed. Claims 1-31 are allowed. The following is an examiner's statement of reasons for allowance: As noted in the previous notice of allowance (under Primary Examiner Greg Morse), the claimed inventions are meant to be within the situation of the establishing the same firewall configuration (at a firewall application in a first wireless transceiver) at a firewall application in a second wireless transceiver. This was particularly distinguished over the situation of the firewall application being hosted separately at a central server rather than within any of the wireless transceivers.

Among the newly cited prior art, Sorenson did not teach or suggest the particular features of the claims because Sorenson specifically shows that a Base Station is used as the central server for the firewall application -- the firewall application being hosted separately at the central server rather than within any of the wireless transceivers. See, for instance, section Installation, subsection Connecting an AirPort Base station -- i.e., the Base Station used separately from the wired and wireless computers. See also section Optimizing Base Station Placement -- i.e., the Base Station being placed after all computers in the wireless network is used in log ins. Thus, the prior art (such as Sorenson) did not teach or suggest the particular features of the claims -- especially in light of the file history.
